

STORY 13. WORK ORDER SEARCH

As a user

I want to search for all work orders on a certain date
so that I can view all information of these work orders

WIREFRAMES:

The first wireframe shows the SportFit application interface. It has an orange header with the 'SportFit' logo and a navigation bar with buttons for 'Home', 'Users', 'Projects', and 'Workorders'. The main content area is dark gray and contains a black box with the text 'Search workorder by date'. Below this text are two input fields: the first contains the date '16/11/2022' and has a calendar icon, and the second is labeled 'Search'. The footer is orange and contains the text '© Leuven-Limburg' on the left and '© Webontwikkeling 3 By Michiel Verhulst & Siebe' on the right.

The second wireframe shows the same application after a search. The main content area now displays a white box with the title 'SEARCH WORKORDER RESULT'. Inside this box is a table with the following data:

Order	20
Employee	Max (BETA)
Date	2022-11-16
Time	From 10:00 till 12:00
Duration	02:00
Description	

The footer is identical to the first wireframe.

ACCEPTANCE CRITERIA:

- From the home page, I should be able to navigate to the work order search page
- A user can enter a date to search for
- The date field is mandatory
- If the mandatory field is not filled in or contains invalid information, the form is shown again with an error message.
- After the form is submitted (Search), the search page will give all the information of the work orders that take place on the requested date
